Applied AI Engineering (Evaluation-minded) | TypeScript/Node.js

I build agentic AI applications and the infrastructure around them (tool-calling, safe execution, data plumbing). I also care about correctness: reproducible test cases, deterministic harnesses where possible, and security-oriented constraints for non-deterministic systems.

Education Siksha ‘O’ Anusandhana (SOA) University, Bhubaneswar, Odisha

2023 – 2027

B.Tech in Computer Science and Engineering

Relevant Work Freelance Full-Stack Engineer (Remote)

2024 – Present

- Built and shipped production web apps with RBAC, webhook validation, and API design focused on reliability and observability.
- Deployed Dockerized services on AWS; used structured logging and metrics to debug issues quickly and prevent regressions.

Applied AI / Testing-Relevant Projects SandboxAI — TypeScript, Node.js, Docker, OpenRouter API, PostgreSQL, React

- Built an agent loop with explicit tool-call logs and failure recovery (reads stderr, rewrites code) — enabling repeatable debugging and evaluation of agent behavior.
- Implemented a secure execution sandbox (network isolation, timeouts, CPU/memory limits) to reduce prompt-injection blast radius and data exfiltration risk.
- Implemented intent classification (LOOKUP / COMPUTATION / AMBIGUOUS) and validated behavior over 50k-row datasets, returning structured outputs (charts) to UI.

Multi-Tenant RBAC Platform — PostgreSQL, Express, Next.js, Clerk

- Implemented webhook-driven workflows and role/permission models with strong tenant isolation — useful for guarding LLM features and limiting data exposure.

Skills Automation: Playwright (comfortable), browser + API testing patterns, load/perf testing fundamentals

Backend: Node.js, Express, REST APIs, PostgreSQL, Webhooks, AuthN/AuthZ, RBAC

AI Testing Concepts: golden datasets, regression checks, hallucination/relevance/latency measurements (framework-agnostic)

Security: prompt injection awareness, sandboxing/isolation, least-privilege design

Languages: TypeScript, JavaScript, SQL
