Applied AI / Full-Stack (TypeScript, Node.js, Next.js)

I build AI-powered products end-to-end: backend APIs, streaming UX, vector search plumbing, and secure execution pipelines. Focus: applied AI engineering (LLM integration, RAG-like retrieval patterns, evaluation hooks) — not core model training.

Education Siksha ‘O’ Anusandhana (SOA) University, Bhubaneswar, Odisha

2023 – 2027

B.Tech in Computer Science and Engineering

Experience Freelance Full-Stack Engineer (Remote)

2024 – Present

- Owned full-stack delivery from backend APIs to frontend interfaces; designed predictable data flows and clean REST APIs.
- Built authentication & authorization (RBAC), integrated payments (webhooks + validation), and shipped production features with analytics instrumentation (GA4, Meta Pixel).
- Deployed containerized services with Docker on AWS (S3, RDS, Fargate); implemented CI/CD practices for reliable releases.

Selected Projects (Most Relevant) SandboxAI — TypeScript, Node.js, Docker, OpenRouter API, PostgreSQL, React

- Built an LLM agent loop from scratch (raw tool-calling, manual message history) with a self-correcting execution cycle that reads stderr and rewrites code on failure.
- Engineered a secure Docker sandbox for executing LLM-generated code: isolated Python containers with strict resource limits, network isolation, and hard timeouts.
- Implemented intent routing (LOOKUP / COMPUTATION / AMBIGUOUS) via LLM classification; validated on 50k-row datasets and returned base64 charts to a React UI.

Multi-Tenant RBAC Platform — PostgreSQL, Express, Next.js, Clerk

- Designed a multi-tenant system (org isolation, roles, permissions) and built admin workflows; integrated Clerk auth + webhook-driven lifecycle handling.
- Modeled data with PostgreSQL and shipped maintainable APIs with clear boundaries and predictable performance characteristics.

AI Resume Readiness Platform — PERN Stack, TypeScript, AWS

- Built APIs that aggregate GitHub + resume signals; implemented scoring logic and deployed services on AWS Fargate with PostgreSQL and S3.

Skills Languages: TypeScript, JavaScript, SQL (PostgreSQL)

Frontend: React, Next.js, Tailwind CSS

Backend: Node.js, Express, REST APIs, Webhooks, RBAC/AuthN/AuthZ

AI / Applied: LLM API integration (OpenRouter), tool-calling agents, retrieval/vector-search plumbing basics, evaluation hooks

Cloud/DevOps: Docker, AWS (S3, RDS, Fargate), CI/CD
